

## Summary

“The place where the story happened was a world on the back of four elephants perched on the shell of a giant turtle. That’s the advantage of space. It’s big enough to hold practically anything, and so, eventually, it does. People think that it is strange to have a turtle ten thousand miles long and an elephant more than two thousand miles tall, which just shows that the human brain is ill-adapted for thinking and was probably originally designed for cooling the blood. It believes mere size is amazing. There’s nothing amazing about size. Turtles are amazing, and elephants are quite astonishing. But the fact that there’s a big turtle is far less amazing than the fact that there is a turtle anywhere.”

— Terry Pratchett, The Last Hero
